

Computer Science Graduate | Aspiring Backend Engineer | Proficient in C#, Java, Python, and Cloud Technologies

A highly motivated Computer Science graduate with a strong foundation in backend development principles and a passion for building scalable and secure systems. Proven ability to design and implement robust APIs, manage databases, and leverage cloud platforms like AWS and Azure. Eager to contribute to a dynamic team, applying skills in backend development, microservices, and system security to drive impactful solutions.

Skills

Backend Development, RESTful APIs, Microservices Architectures, Relational Databases, NoSQL Databases, Data Modeling, System Security, Authentication, Authorization, Cloud Platforms, Containerization, AWS, Azure, Docker, Python, Java, C#, SQL, CI/CD Pipelines, Automated Testing Frameworks, Written Communication, Verbal Communication, Collaboration, Technical Leadership

Experience

Full Stack Developer Intern — FluxPro

May 2025 – Sep 2025

- Developed and deployed new ASP .NET (C#) backend services and RESTful APIs, utilizing Azure SQL for data persistence and integrating secure JWT-based authentication.
- Contributed to the design and implementation of backend features, ensuring adherence to system security and authorization best practices.
- Gained exposure to cloud scalability decisions by researching AWS services (Lambda, EC2, API Gateway) to support future cloud adoption strategies.
- Implemented robust end-to-end and integration testing, utilizing Postman for API validation and contributing to automated testing frameworks.
- Collaborated with the development team using Git for version control and participated in code reviews, demonstrating strong teamwork and communication skills.

Web Developer — Freelance

April 2024 – October 2024

- Managed the full project lifecycle for client websites, from requirements gathering to deployment and maintenance, demonstrating strong project management and client communication skills.
- Optimized websites with SEO strategies, hosting solutions, and analytics integration, enhancing online visibility and lead generation.
- Designed and implemented features that improved customer engagement and streamlined workflows.

Hackathon Award Winner — HackBelfast

Apr 2026 – Apr 2026

- Collaborated with a team to develop an innovative software solution, showcasing strong teamwork and problem-solving skills in a fast-paced environment.
- Awarded Best Eleven Labs project for exceptional innovation and technical execution, demonstrating proficiency in AI systems and LLM integration.
- Presented the project to industry professionals, highlighting effective communication and technical leadership potential.

Projects

Expense Tracker Game

Designed and developed a gamified expense tracking platform where users earn points for logging expenses and meeting budgeting goals. Leveraged ASP.NET (C#) for backend development and SQL Server for data persistence.

ASP.NET (C#), SQL Server, ReactJS, Redux

Secure Banking Application

Built a secure banking system with login, sign-up, and account management functionality, supporting up to 1,000 simulated transactions. Developed using Java and MySQL, with a focus on data protection and user authentication.

Java, JavaFX, MySQL

Stock Valuation & Prediction Model

Developed a valuation model to identify overvalued and undervalued stocks using financial ratios and market data. Utilized Python, Pandas, and Matplotlib for data analysis and visualization.

Python, Pandas, Matplotlib, Time Series Analysis

InvestIQ

AI-powered stock analysis tool designed to help retail investors make more informed decisions. Uses machine learning (XGBoost) to analyse stock behaviour and provide signals around whether a stock may be overvalued or undervalued, along with simple investment insights. Leverages LLM API for enhanced analysis.

Python, XGBoost, Streamlit, LLM API

disti11

Turns messy meetings into clean requirements for engineers. Uses ElevenLabs to transcribe meetings, AI agents to turn conversations into structured business logic & requirements, real-time follow-up questions, and a Q&A agent. Won the ElevenLabs category at HackBelfast.

ElevenLabs, AI agents

Kitchen Co-pilot

AI cooking assistant that recognizes ingredients, suggests recipes, and provides hands-free, step-by-step cooking guidance. Integrates Gemini API and Function Calling for real-time interaction and backend architecture.

Gemini API, Function Calling, Firestore, Spoonacular API
