

Computer Science Graduate | Full-Stack Developer | Backend Systems & Cloud Infrastructure

Final-year Computer Science student with a strong foundation in backend development, system design, and cloud infrastructure. Proven ability to build scalable applications, implement secure authentication, and optimize performance. Eager to leverage expertise in Python, C#, and Java, along with experience in cloud platforms like AWS and Azure, to contribute to innovative backend solutions.

Skills

Backend Development, Python, C#, Java, SQL, ASP.NET, ReactJS, Docker, AWS, Azure, System Design, API Integration, Authentication, Testing, Cloud Computing

Experience

Full Stack Developer Intern — FluxPro

May 2025 – Sep 2025

- Developed and deployed ASP.NET (C#) backend services and React TypeScript frontend features, utilizing Redux for state management and Azure SQL for data persistence, improving UI/UX by reducing scrolling by 45%.
- Engineered features for the internal manager application, collaborating via Git for version control and code reviews, which streamlined workflows and accelerated routine task completion by 20%.
- Implemented comprehensive end-to-end and integration testing with Postman for API validation, reducing average issue diagnosis and resolution time by 25%.
- Integrated secure JWT-based authentication and connected external partner APIs, enhancing system interoperability and ensuring compliance with internal security policies.
- Researched AWS services including Lambda, EC2, and API Gateway to inform scalability decisions and guide future cloud adoption strategies.

Web Developer — Freelance

April 2024 – October 2024

- Delivered custom websites for over 10 clients using WordPress, HTML, CSS, and JavaScript, increasing client online visibility and traffic by up to 25%.
- Optimized websites with SEO strategies, hosting solutions, and analytics integration, improving lead generation and conversions by 35%.
- Designed branded graphics and layouts using Canva, strengthening client marketing campaigns and increasing customer engagement by 40%.
- Managed the full project lifecycle from requirements gathering to deployment and maintenance, achieving a 95% client satisfaction rate and securing repeat business.

Projects

Expense Tracker Game

Designed and developed a gamified expense tracking platform where users earn points for logging expenses and meeting budgeting goals. Utilized ASP.NET (C#) for the backend, SQL Server for data persistence, and ReactJS with Redux for the frontend.

ASP.NET (C#), SQL Server, ReactJS, Redux

disti11

Developed an AI agent system to process client meetings, using ElevenLabs for transcription and AI agents for business logic extraction, generating follow-up questions, and creating requirements in real-time. This project won the ElevenLabs category at HackBelfast.

ElevenLabs, AI agents

Secure Banking Application

Built a secure banking system with login, sign-up, and account management functionality, supporting up to 1,000 simulated transactions. Implemented Java for the backend and JavaFX for the user interface, with MySQL for database management.

Java, JavaFX, MySQL

Stock Valuation & Prediction Model

Developed a valuation model using Python, Pandas, and Matplotlib to identify overvalued and undervalued stocks based on financial ratios and market data. Integrated time-series machine learning models to forecast trends and generate stock valuation visualizations.

Python, Pandas, Matplotlib, Time Series Analysis

AI-powered stock analysis tool

Created an AI-powered stock analysis tool using Python and XGBoost to help retail investors make informed decisions. The system analyzes stock behavior to provide signals on potential overvaluation or undervaluation, offering investment insights. Deployed live on Azure.

Python, XGBoost, Streamlit, LLM API

Kitchen Co-pilot

An AI cooking assistant that recognizes ingredients via camera input, suggests recipes, and provides hands-free, step-by-step cooking guidance. Leveraged Gemini API, Firestore, Spoonacular API, and Google Cloud for backend architecture, live request handling, and data storage.

Gemini API, Firestore, Spoonacular API, Google Cloud
